Congress of Public Services in Lara and Portuguesa will offer solutions to its inhabitants

The National Congress of Public Services was installed in the state of Lara to function as a space for debate, organization and planning of the popular power that allows searching for solutions to the different needs that the entity presents in the field of drinking water, waste collection solids, domestic gas, electricity and transportation.

The installation of the Congress was presided by G/J Néstor Reverol, Minister of Popular Power for Electric Energy and Sectoral Vice President of Public Works and Services; the Governor of the state of Lara, Adolfo Pereira, members of the Cabinet of Ministers of the Bolivarian Government, Mayors, Deputies of the National Assembly and other civil and military authorities of the entity.

Reverol reported that the National Congress of Public Services, previously installed in other states of the country, will serve as a stage for the authorities to reach the different territories and learn first-hand what the needs of the people are. "This Congress is a meeting of knowledge together with our people, because they are the ones who know," he said.

The Sectoral Vice President recognized the work of the Bolivarian National Armed Forces (FANB) and assured that the transversal axis of the stabilization of public services has to go hand in hand with security and supervision, with the aim of

Discuss projects for the benefit of the community

guaranteeing protection, not only of the strategic spaces, but also of any equipment that is installed in a community.

For his part, the governor Adolfo Pereira, recounted the achievements obtained in the entity during the year 2022, among which he highlighted the delivery and installation of 95 transformers in the nine municipalities of the state, more than 5 thousand energy-saving light bulbs placed, 691 thousand domestic gas cylinders distributed and 2 thousand 480 tons of asphalt placed through Invilara.

In the same way, he announced the different works to be carried out: recovery work on the Manto de María Monument, the creation of the Transportista House, strengthening the National Plan for the Repair of Yutong Buses, the activation of the Lara Recycle Plan and the opening of international flights from the

Jacinto Lara International Airport of Barquisimeto (AIJL).

"All the projects that the Mayors present before the Federal Council of Government in matters of public services, have been approved", expressed the G/J Néstor Reverol.

Portuguesa Chapter

In this same order, last Friday, the Portuguesa Chapter Services Congress was installed in the vicinity of the "Batalla de Araure" (Araure Battle) Airport in the city of Acarigua, with the assistance of the Vice President of Public Works and Services, G/J Néstor Reverol, and those in charge of the institutions that make up the instance of the Executive Power.

Vice President Reverol indicated that "with the people we are activating the Popular Management Brigades of Public Services, so that they take control,

supervision and stability, through an agenda built on the basis of Social Cartography."

Reverol pointed out that the reopening of the San Rafael de Onoto substation was carried out, which will benefit 144,000 inhabitants; the completion of the Portuguesa substation, generating 400 kilowatts and the delivery of transformers of different powers.

In addition, he indicated that an

Expressway Lighting Plan was finalized; the rehabilitation of more than 100 deep water wells; activation of Conviasa flights at the Guanare airport; recovery of the public transport fleet with the Yutong company from Venezuela; rehabilitation of sports fields and recovery of 24 Grandparents' Homes with the Barrio Nuevo Barrio Tricolor Mission.

"We are touring the country, entity by entity, with the commitment to

create the map of solutions and strengthen basic services, based on the 3R.Nets (Resistance-Renaissance-Revolution), instructed by the President of the Republic, Nicolás Maduro" Reverol said.

In what corresponds to the Ministry for Ecosocialism (Minec), the implementation of the Portuguesa Recycle Plan was determined.

With five strategic lines

National Reforestation Plan will establish 10 million trees in the country

Through five strategic lines they will reach the goal

The Minister of Popular Power for Ecosocialism, Josué Lorca, announced that the National Reforestation Plan 2022-2023 includes five lines of action that will allow the establishment of 10 million trees in the aforementioned period.

The aforementioned plan stipula-

tes five lines of action: one tree one student, family agroforestry, planting life, urbanism, and conservation.

"The first of the policies is "one tree one student", which will be worked on together with the Ministry of Popular Power for Education and the Bolivarian National Armed Forces (FANB). This year we plan to

reforest more than eight million trees in the national territory", he said.

He indicated that "we have agroforestry, which is the direct connection of the Tree Mission with the boys and girls, with the popular power and the communal councils through the community nurseries".

Similarly, the aforementioned policy "has State institutions through the implementation of nurseries, in addition to social and environmental movements, peasants of organized popular power who receive financing from the Federal Council of Government, for the establishment of forest trees. In this order, we have planned the establishment of a million and a half trees".

He pointed out that the other figure is "the eco-urbanism that includes the beautification of the Great Venezuela Housing Mission, with the Ministry of Housing, in which the placement of 300,000 trees is estimated".

"The other line of action is conserving, which is a directed, specialized and technical policy, to conserve all those trees that we have in Venezuela in danger of extinction, as is the case in the capital, where we have the Nogal de Caracas, a species that has been in that situation and has recovered with the Tree Mission and the National Parks Institute (Inparques). It is expected to propagate 200,000 trees", he pointed out.

Estimates by lines of action or policy total 10,000,000 trees planted in the country, as a goal of the National Reforestation Plan in 2022-2023.

"We want to involve the entire population, that they plant with us and together we fulfill the Fifth Objective of the Plan for the Homeland," he said.

The Minister assured that he was

honored and proud of the activity on the date of "commemoration of World Water Day and the anniversary of the signing by President Nicolás Maduro of the decree creating Caura Park, the largest tropical forest national park of the planet with 7.5 million hectares to preserve life and access to all the local water sources, which is life for the future and the Venezuelan Homeland in the next generations".

Lorca: 2022 is the year to improve public services

Minec presents Draft Law Reform on Comprehensive Waste Management

The Minister of the Popular Power for Ecosocialism, Josué Lorca, submitted to the Permanent Commission of Administration and Services of the National Assembly (AN), a preliminary Bill on Comprehensive Waste Management.

Minister Lorca commented that the document is the result "of months of debates between the teams of the Ministry for Ecosocialism, the Vice Presidency of the Republic and the Attorney General's Office, to create an instrument that allows us to improve governance in the different instances of data collection. waste and residues such as mayors, governors and the governing body that is the Ministry of the Popular Power for Ecosocialism (Minec), to guarantee an efficient and effective removal of solid waste in the national territory.

"President Nicolás Maduro announced that this 2022 is the year of public services, and we are complying with the instruction with this presentation, which is now going to its natural cycle of debate with the People's Power to be

They will ensure efficient removal of garbage

improved and that we have a robust Law of Comprehensive Garbage Management", said Lorca.

He added that the text proposes "the creation of a large registry to handle specific data from all the operators that transport non-hazardous solid waste in the country, which will make it easier for us, together with government agencies, to make sound decisions regarding to this public policy.

He indicated that in the project

we also "talk about the participation of popular power at its different levels. In addition to the strengthening of what the President called "the great undertakings, from the point of view of the circular economy, which is recycling".

"We introduced a new concept in Venezuela: the responsibility extended to the producer, corresponding to large private or public companies, which have responsibility from the initial generation of

a product to its final disposal in a sanitary landfill," he said.

He pointed out that "in this complete cycle, which we could call the industrial cycle of a product, the entrepreneur must be responsible from the beginning to the end. In Venezuela it did not exist and a year ago the decree of Extended Producer Responsibility was created".

For his part, legislator William Gil

said he was proud to receive the Bill, "in the framework of a great Congress of Public Services that has been launched together with Vice President Néstor Reverol".

"We received the Law on the Right to the City, the Law on Waste Management and we plan today to continue the debate on the Water Law, which is about to go to a second discussion," he said.

He argued that "there is a set of

laws that we have been promoting in this commission, which accompanies the National Executive, because our people demand the best management of public services every day".

"We know that there is a major blockade against our country. The President has called us to take the lead, to improve the living conditions of Venezuelans through public services, and that is what we are doing," he specified.

Sworn Brigades against Climate Change

Recycling plan "Everything is transformed" will be promoted in Anzoátegui

The plan "Everything is transformed" will be promoted

Last Saturday the 26th, the Minister of Popular Power for Ecosocialism, Josué Lorca, together with the Governor of the Anzoátegui state, Luis José Marcano, and the Mayor of the Simón Bolívar municipality of the aforementioned entity, Sughey Herrera, promoted the implementation of the recycling plan "Everything is transformed",

located in the aforementioned Park, as well as gardens, courts, playground and irrigation system.

These actions are framed in the actions that the Bolivarian Government has been deploying, through the MINEC, for the construction of the ecosocialist homeland.

as well as the swearing-in of new Brigades against Climate Change with the purpose of continuing to reinforce the 5th. Objective of the Homeland Plan.

Likewise, within the framework of the visit to the state, Minister Lorca and Governor Marcano also addressed the comprehensive recovery of the Andrés Eloy Blanco Park, starting with the Plaza de Los Poetas that is

Creating joint projects

Minister Lorca visited the Redecológica company in the Iribarren municipality

During his visit to the state of Lara to participate in the installation of the Congress of services in the entity, the Popular Power Minister for Ecosocialism, Josué Lorca, visited the Redecológica company, located in the Iribarren municipality.

In the tour of the spaces of Redecológica, the minister reviewed the operational capacity and the potential for transformation and recycling of rubber, for conversion into an element for public use.

"With this company we will be advancing in projects in the coming months, which will include the improvement of our protected natural areas, such as national parks and natural monuments," said Lorca.

March 22nd

President Nicolás Maduro commemorated World Water Day

In commemoration of World Water Day, the president of the Bolivarian Republic of Venezuela, Nicolás Maduro, reiterated through his twitter account, the call to the peoples of the world to join efforts to create plans that promote their protection.

"I reiterate my call to the peoples of the world, let us join forces to create plans that promote the protection of water. From the Bolivarian Government, we continue to work to guarantee access and distribution of the vital liquid to Venezuelans. World Water Day!" the head of state wrote in @NicolasMaduro.

World Water Day is celebrated on March 22nd, and its main objective is to raise awareness about the importance of caring for the so-called "liquid gold" for the life of human beings and species on earth.

The celebration of this anniversary is intended to publicize the world water crisis, and the problems faced by millions of people who do not have access to drinking water supply, as well as the urgent measures that must be taken in this regard.

The Cinema-Forums continue

Documentary projected: New forests to better protect our climate

The documentary argues that planting trees saves the climate

In the continuation of the cycle of film forums called "Climate change, peoples, planet and life", the General Directorate of Training of the Ministry of the Popular Power for Ecosocialism (Minec), screened the documentary "New forests to better protect our climate".

The screening was held in the Waraira Hall Repano, located on the sixth floor of the institution's headquarters, in the South Tower of El Silencio, in the center of the capital, a space that is shared with the Universidad Popular del Ambiente Fruto Vivas (Upafv).

The documentary deals with the thesis that planting trees saves the climate, an affirmation shared by many environmental organizations in the world and that has generated the impulse of reforestation.

In the audiovisual piece, the filmmakers ask themselves if the action of reforestation is enough to contain the effects of climate change, for which they carry out research work in Australia and India.

David Álvarez, outreach director of the Minec General Directorate of Training, indicated that documentaries such as the one shown this week are shown for all those interested in environmental issues.

He pointed out that the activity takes place every Tuesday at 2 pm, and the general public can come to the sixth floor to debate, share knowledge and ideas about the subject after the screening of the documentaries.

REFLECTIONS ON ECOSOCIALISM

The Productive Potential of Ecosocialism

By Josué Alejandro Lorca Vega

Our country is headed towards economic growth, we have managed to evade the more than 500 unilateral coercive measures imposed by North American imperialism and its European lackeys. It is interesting what has happened in countries that, like us, have suffered such an attack outside international law, but the result has been a strengthening of their productive capacities and the development of local talent.

Each nation presents particular potentialities, according to its resources, its industry and its need for development according to the geostrategic context in which they operate. Thus, we see, for example, Iran, which, seeing its oil industry and its national integrity threatened, developed its naval and arms industry. Cuba developed its biotechnological industry, to the point that it is one of the world's leading countries in this field. We can name the well-known cases of Russia and

China, but we all know the place they occupy as world powers.

Not only is the geostrategic interest an engine of potential development, but also the areas of development emerging from the critical situation in which the planet finds itself. Climate change

characteristics, by promoting a Latin American integrationist project, a multipolar world order, the direct dialogue of the peoples and the forging of good living as an expression of good government. An exceptional scaffolding to build development policies aimed at mitigating the effects of climate change and increasing the resilient capacities of peoples.

Ecosocialism is Venezuela's proposal to the world. A political and economic system for the full development of participatory and protagonist democracy, technology that respects life and a non-

predatory economy that will usher in an era of maximum possible happiness.

There is much to do, but it is already being done. Scientific research has a fundamental role in all this, and the basic philosophy of Ecosocialism invites us to leave the academic cloisters and meet the creative powers of the

specifically is one of them. Precisely the adaptation to climate change raises the need to develop new technologies that allow mitigating its effects and increasing the resilience of peoples.

The Bolivarian Revolution has much to give in this context, due to its values and

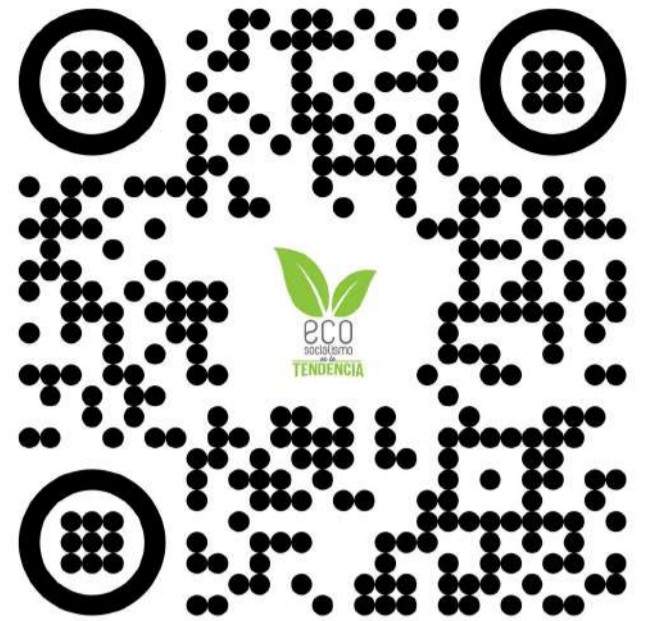

peoples. There are endless popular and academic researchers developing proposals in countless fields of interest for adaptation to climate change. In Venezuela there are researchers developing alternative energy systems, investigating solar panels, techniques to increase CO2 fixation capacities in soils, CO2 collection systems and their industrial use. On the side of resilience, there are those who develop new construction

materials, anti-seismic natural architectures, and in particular, those who systematize the forms of popular political organization, which, in these years of economic war, have defeated the imperial pretensions of promoting a change of government in our country.

There is a breeding ground for sustainable and sustainable development, we need to identify ways to scale ideas towards industrial production, to boost that latent productive potential that can substantially contribute to humanity in its struggles to save the planet.

From the Ministry of Popular Power for Ecosocialism, we are organizing the First National Congress of Researchers Against Climate Change, something that already excites me a lot, because I know of the talent that exists in all the States and I am sure that the

If you want to download this article scan the QR code

event will research lines aimed at strengthening an innovative national industry committed to Mother Earth.

Let's continue advancing with the exhortation to productivity that our President Nicolás Maduro has made to us, Together everything is possible, We Will Win!

Up to date with Nicolás

@NicolasMaduro

03/25/2022

Pleased with the progress made in the recovery of schools and high schools in the country, through the "A Drop of Love for my School" plan. Let's keep going, without fainting, not from a second.

@NicolasMaduro

03/24/2022

Face-to-face classes in schools, high schools and universities in the country will be normalized starting Monday #28Mar . We already vaccinated each and every one to go to the meeting in the classrooms. Great news for children and young people!

@NicolasMaduro

03/23/2022

Sooner rather than later we will consolidate the growth of the real economy and the integral development of the Homeland. Let's build between all and all, a new era of happiness and well-being.
