They will hold a national meeting of Environmental Prosecutors

In a meeting held between the attorney general of the Republic, Tarek William Saab, and the People's Power Minister for Ecosocialism, Josué Lorca, they agreed to draw up a manual of procedures between both entities.

The information was released by the attorney general on his Twitter account, @TarekWilliamSaab, where he mentioned that a review of the environmental measures agreed by the Courts will also be carried out.

Likewise, he outlined that they promote the creation of specialized courts in environmental matters, verification and updating of environmental regulations.

In this regard, he assured that the Public Ministry assumes the environmental issue as the main defense of human rights.

For his part, Minister Lorca assured that on July 28, 29 and 30 they will hold a National Meeting of Environmental Prosecutors to reinforce knowledge on the matter.

Likewise, he insisted that these actions contribute to the fulfillment of the 5th Objective of the Plan of the Homeland and the construction of a new Ecosocialist Venezuela.

1x10 Good Government

Sectoral Vice Presidency of Public Works and Services presented balance

To take stock of the actions carried out through the 1 x 10 System of Good Governance, the Sectoral Vice Presidency of Public Works and Services (Vpsops) brought together the managers, directors and territorial managers of the institutions attached to the instance.

The meeting was held at the Military Circle in Caracas, to comply with the instructions of the President of the Bolivarian Republic of Venezuela, Nicolás Maduro Moros, regarding the application of the new Good Governance methodologies in all areas of public services.

The meeting was led by the Vice President and Minister of People's Power for Electric Energy, G/J Néstor Reverol, who was accompanied by the head of Ecosocialism, Josué Lorca and his entire work team, and those in charge of the areas of Transportation, Attention of the Waters, telecommunications and domestic gas.

"We evaluate the progress of the responses to the requirements of the people regarding the supply of water, electricity, gas, telecommunications, transportation, public works and eco-socialism ; and we also established priorities to continue the debate in the remainder of the year and make

sustained planning for 2023 and 2024", highlighted Reverol.

He said that in seven working groups identified by region: Capital, Western, Guayana, Eastern Insular, Central, Los Andes and Los Llanos, the organization of the 1 x 10, the specific action agenda and the map of solutions were reviewed, which are the new methodologies of the Good Government, which will allow to advance more expeditiously in the attention to the requests of the Venezuelan people.

He added that in this new era of great challenges, one of the main demands of citizens are services, "and given this commitment, the only objective is to guarantee its maintenance and compliance with the third line of action of 1 x 10 that seeks to ensure the right to the environment, to the city and to public services".

Reverol indicated the importance of unification and cooperation between the members of the Vpsops and instructed that "a General Staff of Public Services must be formed in each entity, together with a 1 x 10 Situation Room to know in detail the situation of the communities and reach the most remote places of our country if there is a problem in the services".

They reviewed concrete response actions for the people

National Reforestation Plan 2022 - 2023

High school graduates planted 172 trees in the municipality of Zamora de Cojedes

As part of the "A student, a tree" program, established in the 2022-2023 National Reforestation Plan carried out by the Ministry of People's Power for Ecosocialism (Minec), students in the 5th year of secondary education of the Educational Unit "La Palma", they planted 172 trees in the Ezequiel Zamora municipality of Cojedes state.

During the operation, different native species of the region were established, such as: lemon, soursop, loquat, guava and coffee.

Public servants from the Minec Cojedes, Tree Mission, National Reforestation Company (Conare) and the national director of the Ecosocialist Territorial Units (UTE), José Alejandro Azuaje, Forest Firefighters, Park Rangers, as well as members of the Battle Units participated in the reforestation. Bolívar Chávez UBCH, among other volunteers.

200 kg of solid waste were collected

Areas of the Parque Bolívar Conservationista in Barinas have 150 new trees

Action is part of the National Reforestation Plan

Robinsonian Technical School, the Manuel Palacio Fajardo Lyceum and the Assistive Robinsonian Technical School, and the accompaniment of the Ministry of People's Power for Ecosocialism (Minec), 150 trees were planted in the Park Bolivar Conservationist, located in the state of Barinas.

The conservationist action is part of the "A student, a tree" program, which will allow the recovery of areas devoid of vegetation and contribute to the National

Reforestation Plan 2022-2023. Likewise, an environmental sanitation day was held with the collection of 200 kilograms of solid waste.

Public servants from the Barinas del Minec Ecosocialist Territorial Unit (UTE), the National Reforestation Company (Conare), the Tree Mission, the National Parks Institute (Inparques), the Educational Zone, and the Strategic Command of the Environmental Nursery (CEGA) participated in both activities. of the Bolivarian National Guard (GNB) Barinas, among others.

In Topo Las Piñas Park

Placed 700 plants in the Casalta 3 sector of the Sucre parish

In the continuation of the "One student, one tree" program contemplated in the National Reforestation Plan, students from the Miguel Ángel López Cárdenas Lyceum, located in El Paraíso, established 700 plants in the Topo Las Piñas park, located in the Casalta 3 sector, of the Sucre parish of the capital city.

The 100 high school students, close to graduating from high school, mobilized to plant seedlings of apamate, guava, naked Indian, mahogany and bucare, in three hectares of the 86 that this recreation space has, in the company of members of the Environmental Nursery of the Bolivarian National Guard (GNB), members of Caracas Recicla and students of the Experimental Security University (UNES).

The activity was promoted by the Ecosocialist Territorial Unit (UTEC) Capital, with the support of a commission from the Tree Mission, which was led by

its president Wilmer Vásquez, and the presence of the general director of Technical Schools of the Ministry of Education, José Rojas.

The event coincided with the closing of the 2021-2022 school year, and the conclusion of the first stage of the "One student, one tree" program.

Strategy is part of the program "A student, a tree"

In the 1x10 of the Good Government

Six cargo vehicles retained for permit violations in Barcelona

During an operation to control heavy cargo and hazardous materials transport vehicles, carried out by the Ministry of People's Power for Ecosocialism (Minec) at the Los Mesones toll, in the Simón Bolívar municipality of the city of Barcelona in Anzoátegui state, Six transport units of non-metallic material (granzón) were retained, because the cargo did not have the necessary permits for its use.

In the inspection procedure, it was verified that although the vehicles traveled with a traffic guide, it was found that the place of origin of the load did not present the proper authorization to carry out the activity of extraction and affectation of the natural resource.

The caravan of preventively detained units was transporting the granzón from an illegally exploited mine, and which also did not have the prior environmental control instruments.

It is worth noting that this inspection day was carried out under the action of the 1 x 10 Good Government scheme, established by President Nicolás Maduro Moros.

They did not have authorization to extract granzón

Young people will learn about Circular Economy

Minec set up an ecosocialist training camp in Caracas

The Ministry of Popular Power for Ecosocialism (Minec) installed the Ecosocialist Training Camp in the Generalissimo Francisco de Miranda Recreation Park, in Caracas, with the aim of strengthening the knowledge of the Brigades against Climate Change through training activities. Minister Josué Lorca formally welcomed the young brigade members and stressed: "We are going to continue setting up camps nationwide, and we will continue to carry out activities this holiday season." He emphasized that Minec made a great effort to prepare a grid of training workshops that allow young people to obtain a series of tools for the conservation and preservation of life on the planet, and thus become integral citizens.

In this sense, the Minister highlighted: "We have acquired tents, flashlights, sleeping bags, thermos flasks and first aid kits for all the brigade members who will be part of the Ecosocialist Training Camps".

The installed camp is made up of seven practical-theoretical training sessions on environmental

matters, made up of specialized workshops on environmental interpretation, species identification, especially reptiles, rescue, rope handling and first aid, among others.

At the same time, young people will learn about circular economy and recycling, concepts that go hand in hand and are part of the principles of creation of the Recycling and Cleaning Technical Tables (Metras), a project promoted by the Minec, whose purpose is the to plan and execute actions related to waste management.

The 5,000 young people constituted in the country in Brigadistas against Climate Change will attend the Ecosocialist Training Camps, with the purpose of encouraging others to become part of the organization, and thus reach the goal stipulated by the Minec of 50,000 brigade members at the national level.

The constant training of the young Brigade Members against Climate Change is the key to building an eco-socialist conscience, because in the new generations the foundations are forged to achieve a new sustainable world.

They will take the camp to the entire national territory

REFLECTIONS ON ECOSOCIALISM

Planned Obsolescence and the Environment

By Josué Alejandro Lorca

Nature with the capitalist mode of production faces contradictions impossible to overcome from the theoretical body that supports it. One of these contradictions is infinite growth, in a finite world.

Let's make an example to better understand this: let's take the automotive industry, cars are considered durable goods, a car with good maintenance and regular use can last more than 10 years, how to guarantee that a company has continuous growing income if its products are they durable? Here is the first limit, if you sell long-lasting products, when all the demand is supplied, what will happen to the company? It will be impossible to continue selling cars, there will no longer be families to sell to because they all already have cars. If the life cycle of the product is very long, then a great

innovation will be necessary to do so that those who already have a car, find themselves in the need of wanting something new and replacing the one they already have.

As you can see here, the company would be able to maintain a certain flow of sales by replacing outdated cars. But the problem worsens, because the capitalist system is based on competition, and the company is not the only one, it must fight against other companies to position its products before the others.

If, like the automotive companies, there are not so many equally, they decide to agree on the rules of the game. They establish joint strategies that allow them to maintain a constant flow of demand that benefits them all and prevents new players in the market. What we call Oligopoly is configured.

So the idea that makes everyone agree is: What if we change certain components that wear out easily and promote that wear so that after a certain time of use it breaks, damages or deteriorates and the user is forced to to change the car? This would increase the frequency of replacement of the goods produced that are of long duration, and consequently the purchase of a new one.

This fictional story, although not so much, is how the idea of Planned Obsolescence was born : "it is the determination or programming of the end of the useful life of a product, so that, after a period of time calculated in advance by the manufacturer or by the company during the design phase of the same, it becomes obsolete, non-functional, useless or unusable due to various procedures, for example due to lack of spare

parts, inducing consumers to purchase a new product to replace it (Bulow, 1986).

In one of the previous installments, we talked about circular economy and how the capitalist linear economy affects the environment, with this article I want to pay attention to the impact of this artificial element introduced by industries, together with the accelerating effect that fashion brings and trends, it can be so devastating to Mother Earth.

The practice of Planned Obsolescence has been extended to almost all productive sectors, including less durable goods, to make them almost disposable. Without considering the problem of disposal of these wastes and their impact on the planet's ecosystems.

Another example, clothing, you will have noticed that clothing, regardless of the presumed prestige of a brand, is no longer of the same quality, it unravels, it fades easily, the fabric tears, the buttons fall off, change of season, among others. obsolescence effects. Well, it turns out that it is not only plastic that is the planetary problem, now the mountains of textile waste in the Atacama Desert in Chile are added. In the blog of the German newspaper Deutsche Welle, they present a report and a series of alarming photos: "Every year around 59,000 tons of used and new clothing arrive in Chile, unsold, from all over the world. Huge clothing cemeteries are being formed in the Atacama

desert." Popular organizations try to take advantage of and recycle materials, there is no way to contain the volume of waste irresponsibly disposed of in the open. Not to mention the social impact of the violent dynamics that are generated in the poor towns of the region.

We have one more unsustainable situation generated by Fashion and Planned Obsolescence working hand in hand. Is it possible that this intelligence effort used to find fraudulent ways to accumulate more capital could be used to design intelligent, recyclable products that generate the least possible environmental impact? Sadly no, the capitalist mode of production is self-destructive and irresponsible. But let's see what's behind fashion in particular: A 2019 UN study reveals impressive data:

- 7,500 liters of water are required to produce a pair of jeans .
- The garment sector uses 93 billion cubic meters of water each year, enough for 5 million people to survive.
- The fashion industry is responsible for 20% of the total global water waste.
- The production of clothing and footwear produces 8% of greenhouse gases.
- Every second an amount of textiles equivalent to a garbage truck is buried or burned.
- Clothing production doubled between 2000 and 2014.

Humanity must move towards an important process of

cultural transformation that leads to Ecosocialism.

In another order of ideas, Closing July of this 2022 we celebrate the baptism of my book "Towards the decolonization of environmental thought", an urgent task to begin to understand colonial hegemony, as our Eternal Commander said, "we must resemantize the concepts to unload the cultural load of 500 years of colonization", following this maxim and the guidelines of our President Nicolás Maduro, I have thought it appropriate to contribute with this modest contribution, with the hope that it will serve as an instrument to enliven the debate and the Heroic construction since popular bases.

Together the Great Ecosocialist Transition is possible!

Up to date with Nicolás

@NicolasMaduro

16/07/2022

Saturday of Military Community Brigades for Health and People's Power. We are going hard to repair and activate the entire Barrio Adentro system, ambulatories, CDI, SRI and CAT. Repair, arrangements, readjustment and equipment. Active and active throughout the country!

@NicolasMaduro

14/07/2022

We have to build more and more a powerful National Public Health System, universal, integrated, supportive, scientific, the most efficient and free. All families should have access to community, preventive and primary health. It's the goal!

@NicolasMaduro

14/07/2022

The criminal sanctions made us rethink the rebirth of the real and diversified economy. We went to the countryside to produce our food, with the highest export quality. We have everything to guarantee the comprehensive development of the country.
