Sectoral Vice Presidency of Services and Public Works

More than 255 cubic meters of debris and sediment removed in Las Tejerías

Electricity service was fully restored

In 18 days of intervention in the Las Tejerías sector, located in the Santos Michelena municipality, in the state of Aragua, the 11 work fronts of the Sectoral Vice Presidency of Public Works and Services, removed 255,514 cubic meters of debris and sediment, with 118 machinery and specialized equipment and 5,071 dump truck trips.

This was announced by the sectoral vice president of the area and also Minister of People's Power

for Electric Energy, G/J Néstor Reverol, during a balance of the actions of the Bolivarian Government in this area impacted by a natural disaster.

Reverol was accompanied at the Las Tejerías Presidential Command Post by the heads of Ecosocialism, Josué Lorca, Water Care, Public Works, and the presidents of Cantv and PDVSA Gas.

He affirmed that the electricity service was restored and 656 telephone users have internet signal again, in addition to

distributing more than 17,720,000 liters of drinking water.

Also, he explained that 62 dining rooms have been activated that have prepared more than 18,000 food rations, an action that adds to the house-to-house food supply.

In the health aspect, he assured that nearly 19,000 medications have been delivered and 22,080 people have been treated, including more than 5,000 children.

Meeting Lorca and Mayor Pedro Hernández

Minec will train UBCh to form Community Risk Brigades in Las Tejerías

In order to review the plans that will be implemented in the area, the Minister of People's Power for Ecosocialism held a meeting with the mayor of the Santos Michelena municipality, Pedro Hernández

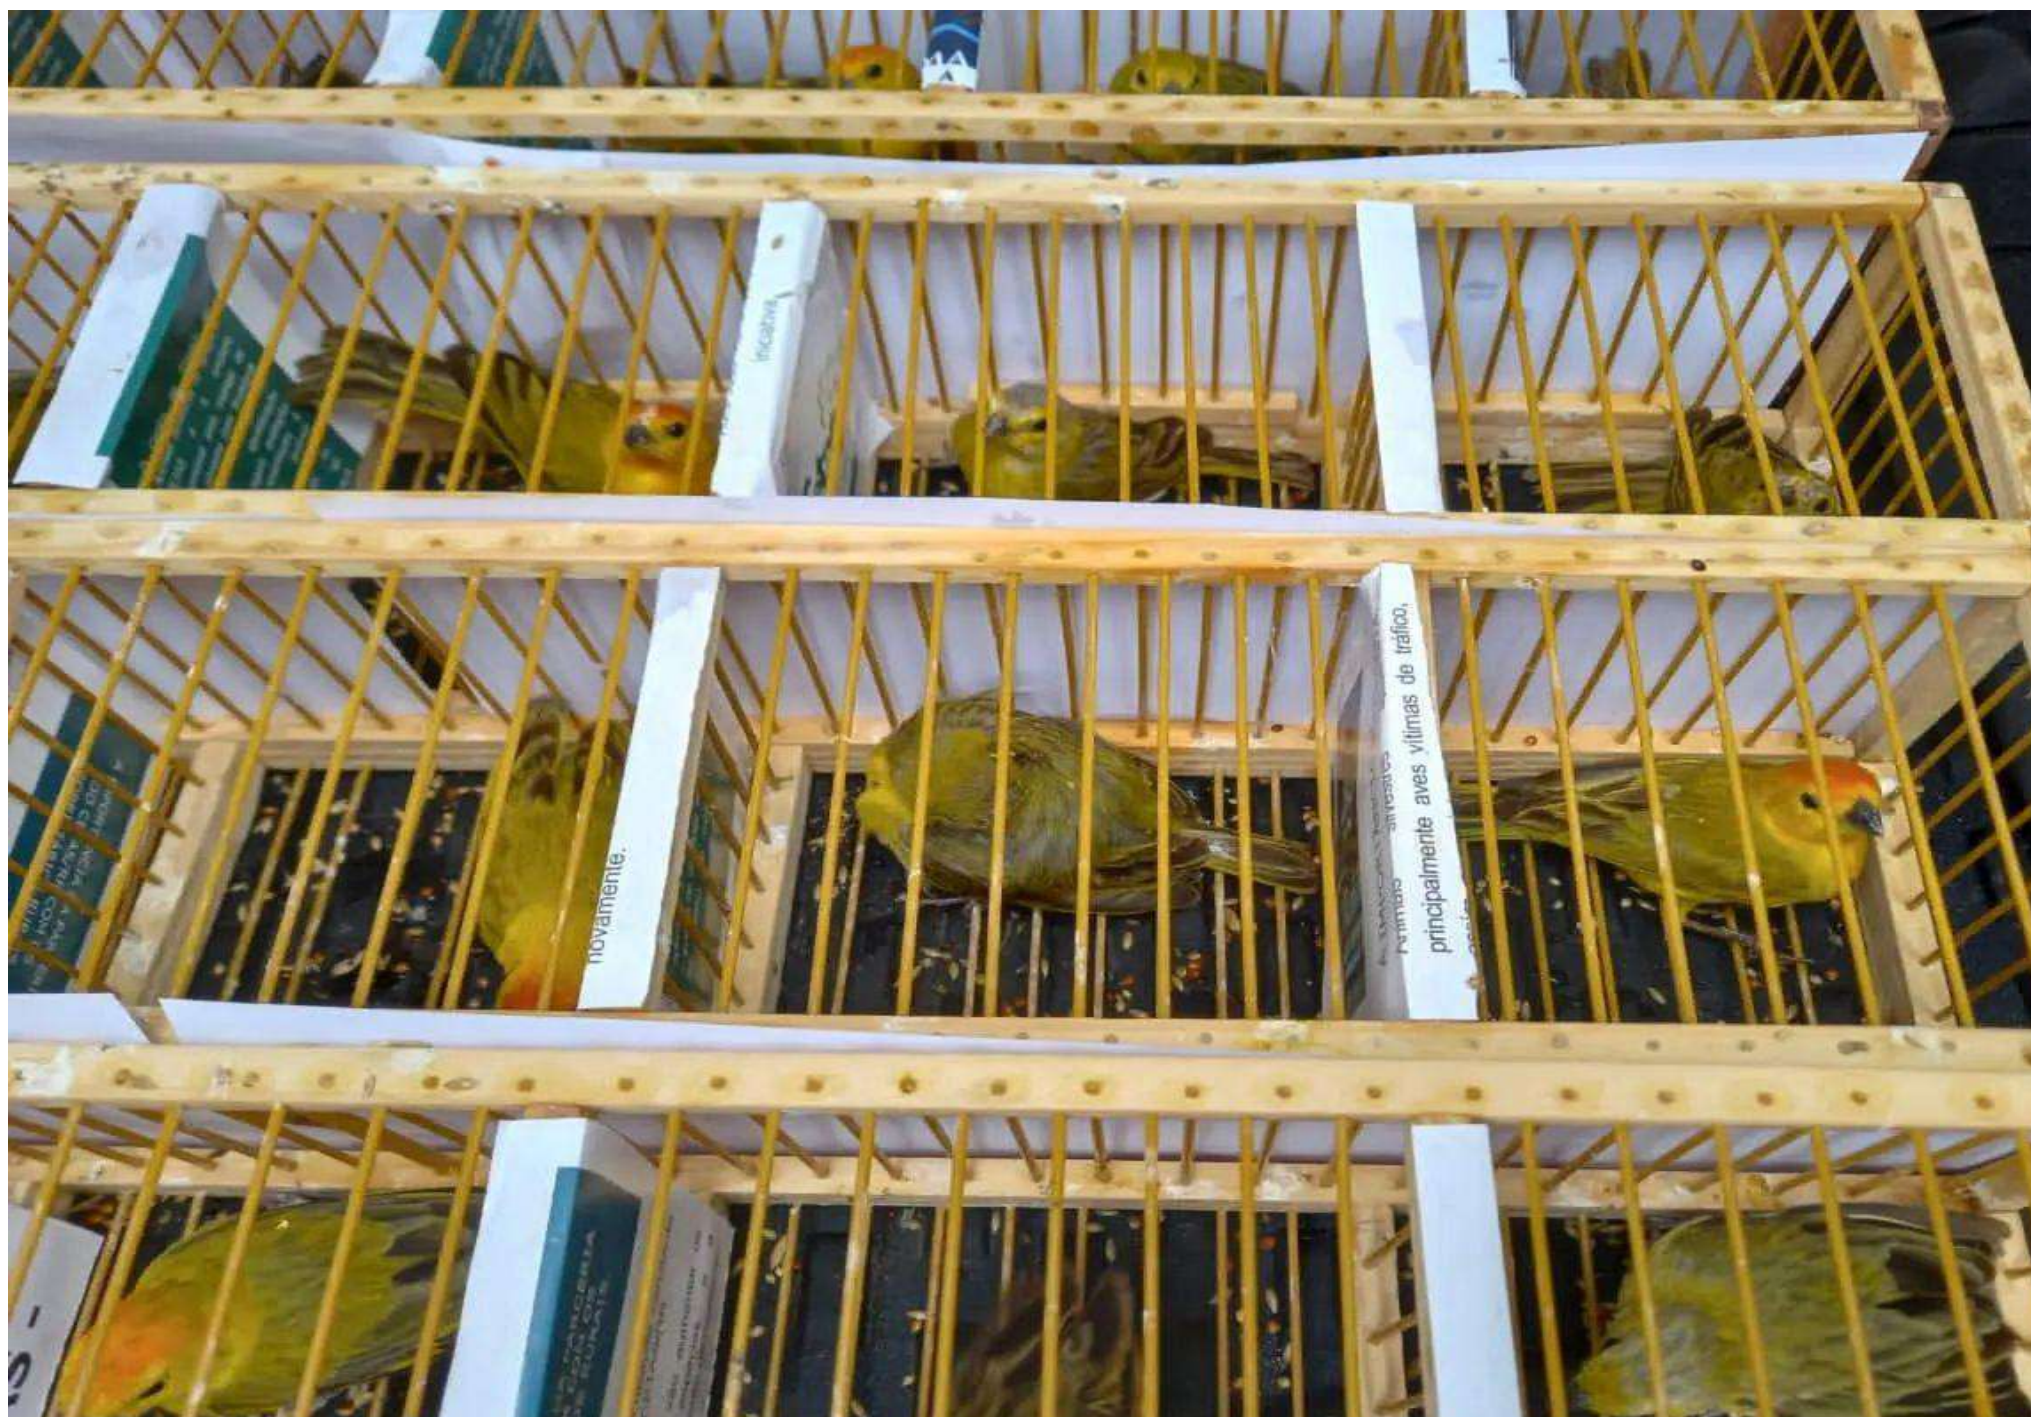

One of the plans is the training that the Bolívar Chávez Battle Units (UBCH) will receive, regarding

the structuring of Community Risk Brigades.

At the meeting, it was agreed to hold a meeting for the formation of 62 Community Risk Attention Brigades, which will be accompanied by Community Risk School Brigades and Community Risk Workers Brigades for the Las Tejerías industrial zone.

By CITES Convention

Venezuela received 202 wild birds repatriated from Brazil

Minec strengthens the fight against trade and illegal trafficking of endangered wild animals

The Ministry of People's Power for Ecosocialism (Minec), in partnership with the Ministry of the Environment and the Brazilian Institute for the Environment and Renewable Natural Resources (Ibama), repatriated 202 birds of Venezuelan wildlife species, after a confiscation carried out by the environmental authorities of the Federative Republic of Brazil.

The repatriation measure of these Venezuelan birds was carried out as part of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES).

The repatriated birds are 200 canaries (*Serinus canaria*) and 02 tarines (*Carduelis cucullata*), which were seized by the Brazilian authorities and officially handed over to the country, to the General Directorate of Biological Diversity of the

Minec, at the cross-border post of the Line in Santa Elena de Uairén, in the state of Bolívar.

The wild birds were transferred to the quarantine of the Generalissimo Francisco de Miranda Park, for their later release.

The procedure also had the support of the Amazon Cooperation Treaty Organization (ACTO) and the Food and Agriculture Organization of the United Nations (FAO).

These actions of return to the Homeland of the Venezuelan fauna specimens, strengthen the fight against trade and illicit trafficking of threatened wild animals, also fulfilling the commitments between the signatory countries of the international agreement, through the focused articulation of the efforts towards the conservation of species on the planet.

Launch of the "Sowing Life" program

Minec reestablishes vegetation cover of the Agua Fría reservoir

National Reforestation Plan 2022-2023 seeks to restore plant cover in hydrographic basins

With a plantation that was carried out on the right slope of the Agua Fría reservoir, in the Guaicaipuro municipality of Miranda state, the Ministry of People's Power for Ecosocialism (Minec), began the "Sembrando Vida" program.

The program, contemplated in the National Reforestation Plan 2022-2023, seeks to restore plant cover in the hydrographic basins that have been prioritized, considered as suppliers of water to the main reservoirs that supply the vital liquid to the Venezuelan population.

The Vice Minister of Environmental Management Services of Minec, Hernán Toro, explained that trees were planted with teams from the National Reforestation Company (Conare), Tree Mission, National Parks Institute (Inparques), the Bolivarian National Guard (GNB), park rangers and the volunteers who have joined.

For his part, the General Director of Minec Ecosystem Management and Conservation Policies, Franklin Linares, indicated that the Agua Fría reservoir supplies the vital liquid to the population of Los Teques. Additionally, the reservoir is a source of supply for agricultural crops and other activities that take place in the area.

"We promote and accelerate the restoration process that will contribute to ensuring the regulation of the water contributions of the Agua Fría basin. In addition, improve the conditions for biodiversity, capture CO2, oxygen emission and a number of benefits from the environmental point of view," he said.

Meanwhile, the president of the Fundación Misión Árbol, Wilmer Vásquez, pointed out that through Popular Power the site is recovered with trees such as chestnut, palo de agua and bucare, to maintain the area for the various communities.

In Canaima National Park

Reopened Paraitepuy Roraima Park Ranger Post

The Minister of People's Power for Ecosocialism, Josué Lorca, reopened the Paraitepuy Roraima Ranger Post, located in the Canaima National Park.

The place of operations and control is strategically located in the community that precedes the beginning of the trail that leads to Mount Roraima, where Lorca delivered a supply of uniforms to the new park rangers and gave kits to the brigade of small indigenous park rangers.

Subsequently, the head of the Ecosocialism portfolio announced the start of construction of the Abuela

Kueka Museum in the Kako Paru sector, the area of origin and where the Abuela stone currently rests.

Lorca also toured the recreational area Kako Paru (Quebrada de Jaspe) to supervise the recovery and restoration of the path, installation of new signage and maintenance of the various spaces.

He also inspected the facilities of the Mirador del Oso, where you can see a panoramic view of the Eastern Chain of Tepuyes Natural Monument, an area recently attended to with general maintenance, installation of signage and the elaboration of panels in which the tepuyes are graphically recreated.

On International Day Against Climate Change

Brigade members sensitize the population to the adverse effects of the atmospheric phenomenon

Brigades Against Climate Change from various parts of the country took to the traffic lights in the streets to spread a message of environmental awareness, on the occasion of commemorating last Monday, the International Day of the fight against the atmospheric phenomenon.

Young people who make up these Brigades Against Climate Change displayed advertisements to call for environmental awareness.

Staff from the Ecosocialist Territorial Unit (UTEC) participated in the activity in various entities of the country, from the Ministry of People's Power for

Ecosocialism (Minec), National Institute of Parks (Inparques), Tree Mission, Popular University of the Environment Fruto Vivas (Upafv), Environmental Nursery of the Bolivarian National Guard (GNB) and high school students.

The action consisted of displaying banners pointing out the consequences of climate change, how to eradicate the phenomenon, and human activity as the main cause of global warming.

The day was conducive to holding a congress and talks on climate change in various states of the country.

Training space on Tuesdays is open to the public

Minec screened documentary: “The role of digital technology in the prevention of natural disasters”

As part of the cycle of film forums called "Climate Change, peoples, planet and life", promoted by the Training Directorate of the Ministry of People's Power for Ecosocialism (Minec), the documentary was screened: "The role of digital technology in prevention of natural catastrophes".

The Director of Dissemination of the Training Directorate, David Álvarez, indicated that the audiovisual piece shows important elements that are used to obtain data, especially in these times of torrential rains with floods, such as those that occurred in Venezuela.

He pointed out that thanks to technological advances "we can avoid and prevent many of the effects of fires, rains and floods, with tools such as GPS (Global Positioning System), satellites, some robots and drones."

These activities are open to the public and take

place regularly on Tuesdays at 10 in the morning, on the sixth floor of the Minec headquarters, located in the South Tower of El Silencio in the center of the Venezuelan capital.

They invite every Tuesday at the Minec headquarters

In protection of the Minec

Four boa constrictors rescued in areas near Maracaibo streams

Four specimens of wildlife, known as swallows (Boa constrictor), are kept in custody at the headquarters of the Ministry of People's Power for Ecosocialism (Minec) in Zulia, after firefighters from the city of Maracaibo handed over the specimens to the ministerial body.

According to the Biodiversity team of the Ecosocialist Territorial Unit (UTEC) Zulia, the firefighters rescued the reptiles that reached a large size (some close to 3 meters and 35 kilograms) scattered in different urban sites near the ravines (ravines).

The boas are kept under permanent observation and evaluation by a veterinarian, pending authorization for their release or another destination determined by the General Directorate of Biodiversity.

Reptiles are large

RELEASE

The Ministry of People's Power for Ecosocialism (Minec), through the General Directorate of Biological Diversity and the Territorial Unit for Ecosocialism (UTEC) Mérida, followed up on the spectacled bear specimen that was located in the protective zone of the Albarregas river basin, Lasso de La Vega parish.

A working group was formed between various national institutions to monitor the days following the sighting of the specimen and in turn the community was directed to stay away from it.

After several days, the specimen returned on its own to the wild in the Sierra de La Culata National Park, the species' own habitat, a space where we hope it can reproduce.

From the Minec, as the governing body in environmental matters, we will be making an approach with the surrounding communities, to socialize the information about the bear, its importance and its preservation.

We call on the community to inform us in case of sighting the specimen to the free number 800-Ambient (0800-2624368); on instagram @miecosocialismo, @diversidadbiologicasminec and @minecmerida to report any eventuality.
