Restoration of relations

Brazil and Venezuela review mutual collaboration on the Amazon Cooperation Treaty

Update on cooperation for the benefit of the Amazon

The President of the Republic, Nicolás Maduro, received Luiz Alberto Figueiredo, Extraordinary Ambassador for Climate Change of the Federative Republic of Brazil, at the Miraflores Palace.

The Brazilian diplomat and the Venezuelan head of state seek to review mutual collaboration ahead of the IV Summit of the Amazon Cooperation Treaty Organization (OTCA).

ACTO is the body responsible for improving the cross-border cooperation process in the Amazon. It is made up of Bolivia,

Brazil, Colombia, Ecuador, Guyana, Peru, Suriname and Venezuela.

The Amazon Cooperation Treaty (TCA), signed on July 3, 1978 and ratified by the eight countries that share the Amazon: Bolivia, Brazil, Colombia, Ecuador, Guyana, Peru, Suriname and Venezuela, is the legal instrument that recognizes the transboundary nature of the Amazon.

Also participating in the high-level meeting were the Minister of Foreign Affairs of Venezuela, Yvan Gil, the Vice Minister for

Latin America, Rander Peña, as well as the Vice Minister for Multilateral Affairs, Rubén Darío Molina.

Through his social networks, President Nicolás Maduro explained that said meeting is "to give continuity to the reestablishment of diplomatic relations and the update on cooperation for the benefit of our peoples and the Amazon".

More than five works have been delivered in the llanera entity

Sectoral Vice Presidency of Public Works and Services works hand in hand with Popular Power in Barinas

The Sectoral Vice Presidency of Public Works and Services (Vsops), held a working meeting in the state of Barinas, regarding the 1x10 of Good Government, with the participation of a third of the Executive Cabinet that delivered executed projects to the communities of the entity.

The Sectoral Vice President of Public Works and Services, G/J Néstor Reverol, led the meeting that was attended by regional authorities, where he stated that "the Bolivarian Government's program work agenda is based on the proposals of the Venezuelan people that defines its priorities, and we from the National Executive commit ourselves to comply with them", indicated Reverol.

That is why he called on governors, mayors, and other authorities to lead using new methods that go hand in hand with the people, even more so in the midst of the economic blockade that the country is going through.

"We cannot govern as we have been doing before," he insisted.

The Minister of People's Power for Communes and Social Movements, Jorge Arreaza, also participated in the activity, who expressed the need for the regional government, city halls and institutions to remain on the streets listening and attending to the needs of the people.

This will help to generate "maps of solutions, new methods of government, to satisfy specific needs and from this a dialectical engine in the development of revolutionary forces," he said.

For his part, the People's Power Minister for Ecosocialism, Josué Lorca, assumed the commitment to reforest the entity's main basins, work to adjust collection rates in the Barinas municipality, provide satellite units, receive requests for repair of solid waste collection trucks, installation of a nursery next to the Corpoelec regional headquarters, in order to produce plants for reforestation, in addition to the construction of a landfill in the Sosa municipality.

It should be noted that a set of works have been delivered in

the state as a result of the early victories and a Concrete Action Agenda, which is developed throughout the llanera entity, as President Nicolás Maduro has instructed.

Projects include:

Installation of 380 lights at the entrance to the Alberto Arvelo Torrealba municipality, corrective and preventive maintenance at the Termobarrancas Plant, rehabilitation of the Ciudad de Barinas Water Treatment Plant, recovery of the Daniel Silva Pacheco Work Center (Gas Comunal) and consolidation of the La Floresta sector Bolivarian, in the El Carmen parish of the Barinas municipality.

Additionally, a Transport Route Plan was prepared for the benefit of 32,245 inhabitants of the Barinas municipality and the adequacy of the Barinense Socialist Enterprise for solid waste (Esobandes) and the sanitary landfill of the Barinas Northwestern Commonwealth.

Minec assumed the commitment to reforest the main basins of Barinas

They will keep colored rings

46 canaries released in the Generalísimo Francisco de Miranda park

A total of 46 canaries were released into their natural habitat, within the facilities of the Generalísimo Francisco de Miranda Park.

The information was released by the Minister for Ecosocialism, Josué Lorca Vega, through his account on the social network Twitter.

Regarding the celebration of Pachamama Day, Lorca celebrated the release of these birds together with the Little Park Rangers.

The activity promotes the conservation of biodiversity and the protection of the animal species that inhabit the park, reported Minister Lorca.

"Celebrating Pachamama together with the Little Park Rangers, we released 46 canaries to their natural habitat, within the facilities of the Francisco de Miranda Recreational Park," he said.

Three months ago the birds were repatriated from Brazil, where they were seized by Brazilian authorities from groups dedicated to the illicit trafficking of wildlife.

Likewise, he detailed in a video attached to the Twitter message that to carry out the release of canaries from roofs, he was accompanied by the team of technicians and veterinarians from the National Parks Institute (Inparques).

"Colored rings were placed on them so that they have individual identification and the community of bird watchers that exist in Parque del Este can monitor them," Lorca explained.

Conefa 2023

UBV and Minec sign an agreement to implement a free chair of Climate Education

Cátedra is an accreditation mechanism to finance environmental projects

The People's Power Minister for Ecosocialism, Josué Lorca, and the rector of the Bolivarian University of Venezuela (UBV), Sandra Oblitas, signed an agreement to implement a Free Chair of Climate Education in this house of studies.

The agreement was formalized at the headquarters of this university, as part of the III National Convention of Advanced Studies and Training (Conefa 2023), which is part of the scientific calendar organized annually by the UBV, whose central theme, for this edition, is "The Academy before the Global Climate Crisis: Towards an Ecosocialist University".

In this sense, the Ministry of People's Power for Ecosocialism (Minec) has worked on the development of the free chair against the climate crisis, with the aim that it be evaluated and approved by all the universities

in the country, and that it be implemented as an accreditation mechanism and means to finance environmental projects through Minec and the Revolving Fund against the Climate Crisis.

"This type of event is what generates us, helps us, and contributes in a concrete way to the construction of socialism, the Bolivarian Revolution, and the creation of a better world," said Lorca.

He added that "the theme of Climate Change is transforming and is advancing to become one of the new forms of domination of poor countries and those that are developing and less favored, which in the case of Climate Change we are talking about the insular and tropical states, which are the most affected and would be the most vulnerable to the climate crisis".

Two males and a couple of the species arrived in the country

Venezuela will support reproduction and preservation of the Bengal Tiger

Only 2,800 white Bengal tigers remain in their natural habitat, according to the veterinarian from the Ministry of People's Power for Ecosocialism (Minec), Adrián Carrero. These data set off alarm bells for environmental organizations and make plans for the preservation of this species urgent.

For this reason, Venezuela contributes its grain of sand and counteracts the danger of extinction faced by the Bengal tigers, and managed through the Minec, the arrival of four tigers from Seville, Spain, to contribute

to conservation projects the species.

"Venezuelan zoos are there to help reproduce them (tigers)," says veterinarian Carrero.

The specimens that arrived in Venezuela are already living in the El Pinar Zoological Park and in the Caricuao Zoological Park, in Caracas.

The authorities in charge received a couple and two males, to be added to four other specimens, with which a reproduction program of this species will be carried out. Upon entering them in

the zoos, a routine check-up was applied, such as laboratory tests, to its subsequent display.

"After they arrive at those two parks and pass the quarantine period, they will be part of a zoo collection, which belongs to biological diversity," said Carrero.

The acquisition of these four Bengal tigers comes almost a year after the Venezuelan government bought three white lions from the Czech Republic in June 2022.

They already live in the El Pinar Zoological Park and in the Caricuao Zoological Park

For a livable future for every child

Seeds for Life national program begins

The People's Power Minister for Ecosocialism, Josué Lorca, in the company of his counterpart for Women and Gender Equality, Diva Guzmán León, launched the National Seed for Life Program at the Caricuao Zoological Recreational Park, an activity that replicated in the rest of the country.

The program seeks that mothers in the company of newborns plant a tree two months after birth, in order to guarantee life on the planet.

Therefore, this plan is focused on the family and especially on the pregnant woman, it is also an invitation to the nuclear family to participate in the responsibility of guaranteeing a livable future for the new human being.

Each family nucleus will receive a kit similar to that of "A Student A Tree", for sowing seeds,

monitor their growth and then move the seedling to the final place.

In this regard, Minister Diva Guzmán León stated that she was on "a special day because this is a unique program in the world, to involve children before they are born in such an important project, even changing the way in which we reach life and this activity is a sign of ecofeminism".

"Recognize ourselves not only as women, but as part of nature and our way of giving life to a human being and to planet Earth. It is important that they join this work of protecting the environment, nature, the air. This task guarantees a better future and that is why you are the protagonists of this great advance", said Guzmán.

For his part, Minister Lorca commented that "at this moment more than 2,400 women participate in this

activity throughout the country. I am sure that this will transform human life, because we are preventing the world from ending with this effective planting. This guarantees the new generation a world suitable for them to inhabit and enjoy nature".

"What is being done today on the instructions of President Nicolás Maduro, is a pioneering activity in the world, which contributes to the planting of a tree and is a beautiful cycle that will mark the child in his childhood, because later he will be in first grade planting under the One Student, One Tree program," Lorca said.

Lorca and Guzmán were accompanied by the president of the Misión Árbol Foundation, Wilmer Vásquez, and the national director of the Humanized Childbirth and Breastfeeding Plan, Yannett González.

More than 2 thousand women participate in this activity throughout the country

It is the first born in Revolución and covers 7.5 million hectares

Caura National Park: Megadiverse natural area of the world

With innovative methods, progress is being made in the construction of the Management Plan for the Use of this Park

To publicize the relevance of the Caura National Park, a meeting was held that was also broadcast online through the videoconference platform, on the aforementioned natural area considered one of the most megadiverse in the world.

The activity was carried out in the Simón Rodríguez Room of the National Assembly (AN), as part of the activities for International Mother Earth Day and the fifth anniversary of the National Park, celebrated last March.

The Ministry of Popular Power for Ecosocialism (Minec), in charge of the head Josué Lorca, prepared the event for the assistance of several specialized speakers who highlighted the geostrategic importance of this Park, in addition to developing a discussion for the collective construction of its Plan of Ordinance and Regulation of Use (PORU).

In this regard, the Vice Minister of Environmental Management Services of Minec, Hernán Toro, stressed that "with this we seek environmental governance, deepen the preservation of our National Parks and be able to spread the importance of this site".

"With this, we have established various innovative methods to go towards the construction of the Use Management Plan for this Park", he said.

The Bolivarian Government, in observance of the ancestral culture of the indigenous peoples and their way of life, has implemented the policies in the area in an articulated manner and through consultations.

As exhibitors were the deputy of the AN, Antonio José Rumbos, who spoke about the "Rights of Mother Earth", the vice minister for Habitat, Land and Community Development, Marianny Romero, discussed

"Original peoples of Venezuela, among other prestigious personalities.

Vice Minister Romero stated that "we are highlighting the importance of the presence of our indigenous peoples and communities. The regulatory system and everything related to cultural and economic practices were being debated, as well as the way of life of these communities".

The Caura National Park is the first park created in revolution on March 22, 2017 by President Nicolás Maduro Moros, to preserve the spaces of this extensive region between the Bolívar and Amazonas states. It is the largest in the country and the second largest in the world. It covers 7.5 million hectares, an area that exceeds in territory more than seventy (70) countries.

UP TO DATE WITH NICOLAS

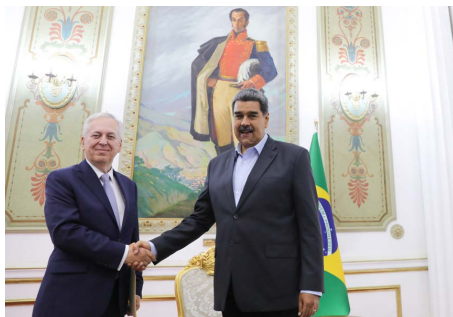

@NicolasMaduro
04/28/2023

I received from the hands of the President of the National Assembly, Dr. Jorge Rodríguez, the Organic Law of Asset Forfeiture, which was created to hit corrupt mafias. I appreciate, on behalf of our people, the speed in approving this powerful and important law

@NicolasMaduro
04/26/2023

Fighting climate change and the savage capitalist model that accompanies it is a duty for all of us. Our alliances are aimed at that fundamental objective: to preserve the lives of the peoples of the world.

@NicolasMaduro
04/25/2023

I received a pleasant visit from Luiz Alberto Figueiredo Machado, Extraordinary Ambassador for Climate Change of Brazil. Our objective as sister nations is to work more and more together for the protection of the environment and the Amazon region. We will advance!
