VPSOPS together with the National Committee for Ecological Transformation discuss sixth line of the 7T Plan

Assemblies are constantly being held throughout the country

The Sectoral Vice-Presidency of Public Works and Services, the National Committee for the Ecological Transformation and the Mayor of Caracas, A/J Carmen Meléndez, led a great Day of Collective Construction for the 6T Ecological Transformation, as part of the deployment and debate of the 6th line of the 7T 2030 Plan.

The activity took place, with the attendance of spokespersons of the People's Power, at the facilities of the Ministry of People's Power for Electric Energy (Mppee), to discuss aspects of the 6th Transformation recently proposed by the President of the Republic, Nicolás Maduro Moros.

The meeting was led by the sectorial vice-president for Public Works and Services and head of the Ministry of People's Power for Electric Energy, G/J Néstor Reverol, accompanied by the Minister for Ecosocialism,

Josué Lorca, the heads of Transportation, G/B Ramón Velásquez Araguayán, and of Water Attention, G/D Rodolfo Marco Torres, among other authorities.

The National President made a presentation on the Seven Transformations (7T) that the country needs to become a power, lines that arise from the five national consensuses, among which is the 6th line, which is ecological.

The activity promoted the participation of the Popular Power and the workers of the different entities related to the 6th transformation, through different generating questions, with which proposals and contributions were made to build Venezuela Power.

The Ecosocialist Management Team contributed to the strategic workshops, seeking to formulate new ideas that contribute to

mitigate environmental problems and find sustainable solutions that strengthen the preservation of Mother Earth.

In this regard, Minister Lorca highlighted that "with this assembly, which are being held simultaneously at national level, it is also part of the same original process that we lived with Commander Hugo Chávez for the construction of the Constitution of the Bolivarian Republic of Venezuela (...) and now we, with President Nicolás Maduro Moros, continue on this path".

He assured that the goal is to build the road map between now and 2030, as Commander Chávez also marked the ecological and environmental part which plays a fundamental role, since it is transversal to all the actions undertaken within the Bolivarian Revolution.

He assured that "the Bolivarian Revolution has great features that we can identify: it is the Constituent and Constituted Power constantly reinventing itself, building together with the government at different levels, that is to say, the Bolivarian Revolution is not without the Popular Power".

The National Government is developing several meetings in the country regarding the 7 Transformations, to achieve strategies and sensitize the population on the relevance of the transformations towards 2030.

It is important that we all assume that taking care of the environment is fundamental for a healthier and more sustainable life.

It has a diversity of exotic and endemic species

Aqua Reptarium inaugurated at the Caricuao Zoo Park

As part of the programs and projects of the System of Parks, Zoos and Zoos, the Ministry of People's Power for Ecosocialism inaugurated a Terrarium-Aquarium at the Caricuao Zoo, southwest of the capital, with a diversity of exotic and endemic species.

The space, under the protection of the National Institute of Parks (Inparques), an entity attached to Minec, is the sixth of its kind in the country and houses the largest number of species for the observation of visitors, especially the youngest ones, with the purpose of providing a unique experience and expanding the knowledge about reptiles and arachnids.

The activity was attended by the head of Minec, Josué Lorca, the mayor of Caracas, A/J Carmen Meléndez, the head of the

Government of Caracas, Nahum Fernández, the vice-minister for the Preservation of Life and Biodiversity of Minec, Colonel José Ramón Pereira, the general director of Biological Diversity of Minec, Juan Carlos Santander and the coordinator of the Caricuao Zoo, Jesús Hidalgo.

The place has a suitable habitat for each species and will allow research and scientific methodologies that promote the analysis and instructive observation of the ecosystems in universities and study centers for the breeding, development and life cycle of the animals in captivity, with the care of the healthy balance of their populations.

In this respect, Minister Lorca indicated that "it is important to highlight that this space has two important

for the reproduction of endangered species, one is a small snake, a mapanare, typical of the coastal mountain range, which is in danger of extinction as a result of human action".

"The site is aimed at all the public, especially children, so that people can learn, respect and protect the behavior of these beings that are also part of the delicate ecosystem balance of the planet," he said.

Meanwhile, Mayor Meléndez highlighted the work of the Ministry for Ecosocialism (Minec), under Minister Lorca, in establishing an area for the study, care and awareness of the environment, through interactive spaces and family recreation that allow the education of all.

The Terrarium-Aquarium has an area of 327 square

meters, with a graphic setting according to the theme, using a varied set of colors and textures that motivate and attract the attention of visitors.

The structure features an entrance that simulates the head of a snake and an exit that resembles an eel. In addition, there is an Eco-shop that exhibits various products alluding to animal life, with figures of marine specimens, reptiles and arachnids, among others.

The new area of the Caricuao Zoo will support the environmental objectives of the Venezuelan nation, strengthen the policies of conservation of biological diversity, with the commitment to ensure the preservation, care and optimal study of species.

The site is specially designed for children

Included equipment for Forest Firefighters and Civilian Park Rangers

Unified National Command against Forest Fires in Aragua Operationalized

801 forest fires have occurred during the season

The Minister of People's Power for Ecosocialism, Josué Lorca, the Governor of Aragua State, Karina Carpio and the Vice Minister for Risk Management and Civil Protection, M/G Carlos Pérez Ampueda, operationalized the Unified National Command against Forest Fires located in Henry Pittier National Park in Aragua State.

With this installation, the important service of addressing and controlling potential forest fires in the areas of Henry Pittier National Park, which celebrates its 87th anniversary of having been declared a protected area on February 15, is fulfilled.

As a novelty for this dry season, in alliance with Petróleos de Venezuela

S.A. (Pdvs), the first water system made with a 7.5 meter diameter oil tank with a storage capacity of 300,000 liters of water is in operation, which will supply the tanker helicopters of the Bolivarian National Guard (GNB) for drizzle operations.

Likewise, the tank has outlets for fire suppression trucks which will be used for control and liquidation on the Maracay Choroni National Highway.

In this regard, Minister Lorca indicated that "the moment synthesizes what has been a struggle of the firefighters and park rangers of Aragua State: the improvement of the system for fighting forest fires".

Lorca assured that "although the command is operational today, it is

activated 365 days a year during the dry and rainy season".

Lorca, while offering a balance of the fires that have occurred in the country, pointed out that there have been 801 forest fires since the beginning of the drought period and 72 have been registered in the Aragua region, of which 18 were in the Henri Pittier National Park, which represents almost 10% of the incidence".

"Why we are concentrating here and we have spoiled Aragua, because besides having the first national park of the country, with all the altitudinal floors and ecological importance, it is one of the territories where forest fires occur the most", he said.

Lorca announced the delivery of 30 motorcycles

for forest firefighters, four four-wheeled vehicles, a complete set of uniforms for forest firefighters, boots, uniforms for Aragua's volunteer corps and a "Bambi bucket" device for the Aragua state helicopter.

In addition, the following implements were supplied: a motorcycle repair kit for Dr 650, communication radios for the regions, uniforms and boots for the Civilian Forest Ranger Corps, 500 beaters for fighting forest fires, forest rakes, forged shovels for forestry use to evacuate or transfer earth, bunk beds and mattresses.

Minec will attend rivers and streams

Integral Public Services Attention Plan strengthened in Aragua

The Vice-President of the Public Works and Services Sector (Vpsops), G/J Néstor Reverol, assumed new commitments to continue advancing in the Integral Plan for the Attention of Public Services in the state of Aragua.

These responsibilities were reached in a meeting held with the Governor of Aragua, Karina Carpio, and other authorities.

Among the plans agreed upon in the areas of electricity, water, roads, transportation and public works and eco-socialism are:

- Delivery of 55 transformers, 700

luminaries for the Integral Plan of Express Roads and 15 thousand light bulbs that will be distributed house by house.

- Rehabilitation of 126 kilometers of the road system and the recovery of 80 Yutong units, belonging to the transport operator TransAragua, in order to reinforce the mobility of the people.

- Attention to rivers and streams for risk reduction.

- Restoration of 530 schools and 50 sports fields for the good living of the citizens.

- Maintenance and installation of new deep wells to guarantee the water supply in the different sectors of the entity, where 125 submersible motors and

114 pumps have been delivered to improve the water system.

- Massive distribution of domestic gas, replacement and delivery of 5 thousand cylinders in the most vulnerable communities, with the objective of contributing to the security and food sovereignty of the people.

The head of Minec, Josué Lorca, assured that during the meeting, the commitment to pay attention to rivers and streams for the reduction of risks during the rainy season was reaffirmed, as part of the 7T, as instructed by President Nicolás Maduro.

For her part, Governor Carpio expressed her

commitment to promote the Integral Plan for the Attention of Public Services in Aragua. "We will listen, we will contribute and we will do everything to make this plan a success", she emphasized.

In this way, the Sector Vice-Presidency of Public Works and Services is complying with the objectives proposed by the President of the Republic, Nicolás Maduro, in the 7T 2030 Plan, to achieve the great transformations in the area of electric service.

These actions correspond to Plan 7T 2030

7T-2030 for Good Living

Minec to provide 15 containers for the community of Plan de Manzano as part of the 1x10 of Good Governance

Authorities toured the area together with Poder Popular

In the territorial axes 4 and 5 of the Plan de Manzano and El Limón sectors, located in the Sucre parish, in Caracas, the second day of the 1x10 and Social Transformation was carried out.

During the activity, the Minister of People's Power for Ecosocialism, Josué Lorca, announced that among the agreements reached was the provision of 15 containers to improve the quality of solid waste management and guarantee the good living of the inhabitants of this populous area.

During the 1x10 day, the Sectorial Vice-President of Public

Works and Services (Vpsops), G/J Néstor Reverol, accompanied by the members of this State organ, the Mayor of Caracas, Carmen Meléndez and the Head of Government, Nahum Fernández, toured the area together with the Popular Power to supervise the works being carried out by the ministries and entities attached to the Vpsops, among which are:

- Replacement of lighting fixtures and transformers in 15 communities and public roads, as well as maintenance with Pica and Pruning in the corridors.

- Replacement of gas cylinders and Saturation Plan with a mobile plant that will reduce distribution cycles to 18 days.

- Installation of 120 meters and 500 meters of drinking water pipeline that will benefit more than 16 thousand families.

- Evaluation of main pipeline with multiple connections to the communities.

- Rehabilitation of roads and collection of scrap metal.

In addition, they held a Public Services Assembly

in which they listened to the requirements of the inhabitants of these axes, to which they will follow up through the Sala Situacional.

"The people have the complete action agenda of what we must do, that is why we are here listening to the Popular Power to attend to their needs and go for social transformation, through the strengthening of public services", concluded Reverol.

From Amalivaca Ediciones

Minec presents Manual of Priority Areas to Attend Forest Fires

Through his social networks, the Minister of People's Power for Ecosocialism, Josué Lorca, presented the Manual of Priority Areas to Attend in case of Forest Fires and in the Integral Management of Fire.

According to the information presented by Minister Lorca, the

book "presents a vision and routes of coordinated actions for the prevention, education and early detection of any forest fire event".

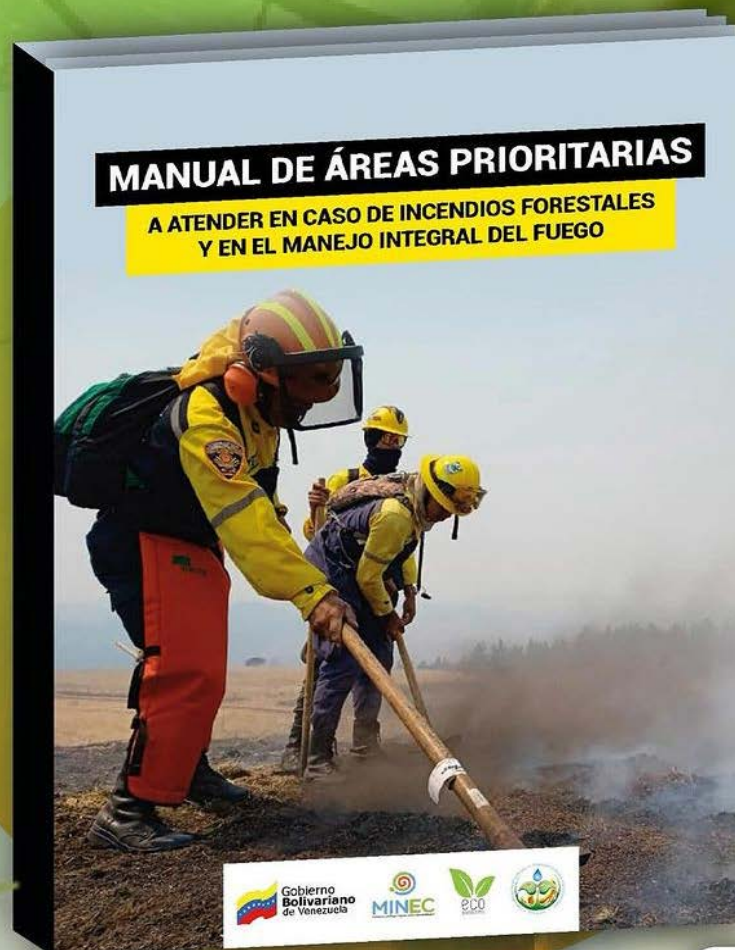

The publication also points out that "this manual is fundamental for the formation of an integral collective environmental conscience, since we

have large Special Administration Regime Areas, such as national parks, natural monuments, and hydraulic reserves" which deserve protection from both man-made events and the consequences of climate change.

It also provides tools for the investigation of the facts, their possible

causes and whether it is feasible to apply existing laws.

It is worth noting that during 2023, more than 2,204 forest fires were fought in Venezuelan territory. As well as a total of 1938 cases attended through the 0800-Environment.
